

At Last an affordable two way paging solution that works

Whether you want to improve efficiency in a busy restaurant, minimize response times to fire alarms or access usage data for management reporting, CaptureCall is the right solution for you.

CaptureCall Modules Available

Reporting: Full details of all messages are time stamped & logged to a database. On-screen or browser connection and data export for analysis with other applications.

Trigger Timer: As different messages are received they are colour coded on-screen (user definable) and shown clearly on the display.

Fire Alarm Notifier: When connected to a suitable fire alarm panel, activations (alarms, faults etc.) are forwarded to designated pagers for immediate, fully informed actions.

Intruder Alarm Notifier: Alarm activations are sent to the relevant pager or group of pagers, this ensures a fast and efficient response time.

Two Way Paging: CaptureCall allows for two way paging at an incredible price point!

Output Triggering: A variety of external devices can be activated, switched or triggered upon receipt of specific pager messages.

SMS & Email Forwarding: When pager messages are received, they can be forwarded as SMS messages to mobile phones and/or via Email. There's also facility to send an Email to a pager.
